Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int findFloor(int arr[], int low, int high, int x) {
    int floor = -1;

    while (low <= high) {
        int mid = (low + high) / 2;
        if (arr[mid] == x) {
            return arr[mid];
        }
        else if (arr[mid] < x) {
            floor = arr[mid];
            low = mid + 1;
        }
        else {
            high = mid - 1;
        }
    }

    return floor;
}

int main() {
    int n, x;
    scanf("%d", &n);
    int arr[n];

    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    scanf("%d", &x);
    printf("%d", findFloor(arr, 0, n - 1, x));

    return 0;
}
```
